

Vmware Certified Professional - Desktop

1. Which are the correct parameters to specify when adding an iSCSI target to an ESXi Host using the Static Discovery tab?

A. iSCSI server ip address, port 902

B. iSCSI server ip address, port 3260, iSCSI target name

C. iSCSI server ip address, port 902, iSCSI target name

D. iSCSI server ip address, port 3260

Answer(s): B

2. An ESXi 5.x host displays a warning icon in the vSphere console and its summary page lists a configuration issue "SSH for the host has been enabled." What are two ways to clear this warning? (Choose two.)

A. Using the Security Profile pane of the Configuration tab in the vSphere Client

B. Using the Networking pane of the Configuration tab in the vSphere Client

C. Using the Direct Console User Interface (DCUI)

D. Using the Advanced Settings pane of the Configuration tab in the vSphere Client

Answer(s): A,C

3. Which View feature is used to authenticate a Kiosk Mode connection by client device rather than end user?

A. Kiosk Security

B. vShield Endpoint Security

C. Device Verification

D. Flexible Authentication

Answer(s): D

4. An administrator wants to determine the current network adapter configuration for an uplink on an ESXi host.

A. vSwitch configuration

B. Adapter Name

C. Adapter Driver

D. VLAN configuration

E. Actual speed and duplex

Answer(s): B,C,E

5. Which steps must a View administrator perform to configure View Persona Management with View desktops?

A. Install the View Agent with the View Persona Management setup option on the virtual machine that is used as a parent or template.

B. Install the View Agent with the View Persona Management setup option on the replica.

C. Install the View Agent with the View Persona Management setup option on the vCenter Server systems.

D. Install the View Agent on the virtual machine and enable the View Persona Management option on first boot.

Answer(s): A

6. An administrator is installing a Windows Server 2008 operating system into a virtual machine on an ESXi 5.x host.

A. Broadcom SAS

B. LSI Logic SAS

C. Paravirtual SCSI

D. BusLogic SAS

Answer(s): B,C

7. A View administrator is updating a desktop source that has been in use for full clone desktops. The administrator now wishes to use the desktop for linked clones.

A. Enable View Composer Agent.

B. Create a template from the virtual machine.

C. Take a snapshot of the virtual machine.

D. Reinstall the View Agent on the desktop.

Answer(s): A,C

8. ACME Tools has a vSphere 5 deployment with an older iSCSI storage array. The administrator is considering adding an additional array which will include support for the vStorage APIs for Array Integration (VAAI).

A. creating VMFS datastores on the new array

B. writes to thin provisioned virtual disks on the new array

C. creating fault tolerant virtual machines on the new array

D. migrating virtual machines using Storage vMotion between the arrays

Answer(s): B,C

9. When creating an Automated Pool with Full Clones, which two settings require Floating Assignment? (Choose two.)

A. Allow multiple sessions per user

B. Remote desktop power policy

C. Allow users to reset their desktops

D. Delete desktop after logoff

Answer(s): A,D

10. What are two requirements for successful vMotion migration? (Choose two.)

A. Virtual machines must not utilize hardware local to the host such as SCSI pass-through.

B. Dedicated Gigabit Ethernet Networking must exist between the source and destination hosts.

C. CPUs with matching SpeedStep settings on both the source and destination hosts.

D. Virtual machines must not have a CDROM connected via the vSphere client.

Answer(s): A,D

11. In the View Administrator Dashboard, a datastore is highlighted as being unavailable, even

A. Some, but not all, vSphere hosts in the cluster have the datastore defined.

B. View Composer provisioning has been manually disabled for the datastore in one or more pools.

C. The datastore has been configured for High Availability (HA) Heartbeat which is not compatible with View Composer.

D. The datastore was out of space and the error has not yet been cleared in vCenter Server.

Answer(s): A

12. An administrator is preparing a new desktop source for a linked clone pool.

A. VMware View PCoIP agent

B. VMware View View Agent with Persona Management setup option

C. VMware Tools

D. VMware View Agent

Answer(s): C,D

13. An administrator is creating a new desktop source using Windows 7 and would like to ensure it properly activates.

A. KMS

B. MAC

C. FLEX

D. MAK

Answer(s): A

14. An administrator is deploying several ESXi 5.x hosts. Centralized logging with accurate timestamps is a requirement for the deployment.

A. Configure a syslog server on the vSphere Management Appliance

B. Ensure TCP port 123 is not blocked

C. Ensure the hosts have the proper timezone configured

D. Configure a syslog server on each host

Answer(s): A,B

15. An administrator needs to re-install the VMware Security Server several months after initial deployment, but the installation is failing.

A. The ports 4001 and 8009 are not open in the firewall between the Security and Connection Servers.

B. The password being entered does not conform to the complex security requirements enforced by Active Directory.

C. The time allotted for the Pairing Password on the View Connection Server has expired.

D. The Windows Firewall on both the View Connection Server and the View Security Server is enabled.

Answer(s): A,C

16. Which three Windows Firewall ports are automatically opened for proper installation of View Connection Server on Windows 2008? (Choose three.)

A. TCP 4001 in

B. TCP 32111 in

C. TCP 9008 in

D. TCP 8009 in

E. UDP 4172 out

Answer(s): A,D,E

17. What is the optimal encryption setting to improve user experience when configuring PCoIP?

A. SALSA20-256

B. AES-128

C. PGP encryption

D. SSL/TSL

Answer(s): A

18. A system administrator needs to provide a service pack update to a currently deployed ThinApp package.

A. ThinApp AppSync

B. ThinApp Sync Manager

C. ThinApp Update Manager

D. ThinApp AppLink

Answer(s): A

19. An administrator has View installed in a LAN environment with tunneling disabled. Users are reporting that when they try to cut-and-paste from their View Desktop to the endpoint device, the operation does not work.

A. Change the Configure Clipboard Redirection option in the PCoIP Group Policy settings to Enabled in Both Directions.

B. Enable the Bidirectional Cut and Paste option under the PCoIP settings for the desktop pool in View Manager, and refresh the pool.

C. Cut and Paste from the virtual desktop to the endpoint cannot be enabled due to security concerns.

D. Change the following lines in the VMX of the virtual desktop: Isolation.tools.copy.disable=false

Answer(s): A

20. Which service or task should be disabled to minimize unneeded OS disk growth on a heavily used linked clone pool that is refreshed daily using View Composer?

A. System Restore

B. Automated registry backups

C. Hibernation

D. Scheduled Disk Defragmentation

Answer(s): A
